NOIDA, UTTAR PRADESH**

INTERNSHIP PRESENTATION

DATA ANALYTICS

An Internship Report on Data Analytics

Submitted to School of Computer Science and Engineering in partial fulfilment of the requirement for the degree of Bachelor of Technology in Computer Science and Engineering.

 **Academic Batch: 2024 – 2028**

August
2026

Declaration & Acknowledgement

Candidate's Declaration

I, **TANISHQ RAWAT** (Roll No. 210030475), hereby declare that the internship report titled "**DATA ANALYTICS**" has been completed by me to fulfill the degree requirements for B.Tech in Computer Science and Engineering at IILM University, Greater Noida.

I affirm that this report represents my original work, all external resources have been duly cited, and it has not been submitted for any other academic award.

Acknowledgements

I express my sincere gratitude to the faculty of the School of Computer Science and Engineering, IILM University, for their continuous encouragement and academic support.

I extend my heartfelt thanks to my mentors at **Gneiss Industries Pvt Ltd** for their invaluable guidance on real-world data analytics problems, and to my parents for their constant blessings.

Organization Profile

Gneiss Industries Pvt Ltd

Headquartered in Noida, U.P., operating under the guiding principle *"Building Tomorrow, Together"* under the leadership of Director Mr. Ytharth Agrawal.

Core Values & Pillars

Built upon three core commitments — **Commitment, Learning, and Growth** — alongside core organizational values of Excellence, Innovation, and Integrity.

Domain & Focus

Specializes in transforming unstructured business data into actionable insights through statistical analysis, predictive modeling, and business intelligence dashboards.

Problem Statement & Industry Challenge

80%

UNSTRUCTURED DATA

10x

DATA GROWTH

< 20%

DATA UTILIZATION

100%

DECISION RELIANCE

⚠ The Core Challenge

Modern enterprises generate massive volumes of operational and transactional data daily. However, a significant portion remains under-utilized due to fragmented systems and the lack of structured analytical workflows. The primary objective of this project was to design and implement an end-to-end data analytics workflow to clean, process, and analyze real-world datasets for actionable business insights.

Key Project Objectives

Data Consolidation

Collect and consolidate raw data from multiple disparate sources into a single structured dataset.

Data Cleaning

Pre-process data by handling missing records, eliminating duplicates, and standardizing formats.

Exploratory Analysis

Perform EDA to identify key trends, correlations, variance distributions, and outlier patterns.

BI Dashboards

Build interactive visual dashboards using Power BI and Tableau for clear stakeholder communication.

Predictive Modeling

Apply statistical and machine learning algorithms to generate predictive trend forecasts and churn metrics.

Actionable Reporting

Document analytical findings and present strategic data-driven recommendations to leadership.

Scope of the Project

✓ In-Scope Activities

- ✓ End-to-end analytics pipeline execution over a 60-day internship timeframe.
- ✓ Raw dataset ingestion, data quality checks, and structured feature engineering.
- ✓ Exploratory statistical plotting and correlation matrix computations.
- ✓ Development of machine learning predictive prototypes (Regression & Classification).
- ✓ Creation of executive Business Intelligence reports and visual dashboards.

✗ Out-of-Scope & Future Work

- ✓ Full-scale microservice deployment of models into a live production cloud environment.
- ✓ Real-time streaming data ingestion pipelines (e.g., Apache Kafka / Spark Streaming).
- ✓ Automated model retraining triggers and enterprise continuous deployment (MLOps).
- ✓ Direct database write-back mechanisms for operational legacy platforms.

Technologies & Tools

Category	Tools / Technologies	Application & Purpose
Programming	Py Python da Pandas NumPy	Data cleaning, array manipulation, and data frame transformation
ML & Viz Libraries	Sc Scikit-learn ip Matplotlib rr Seaborn	Statistical modeling, correlation heatmaps, and trend plotting
Querying Language	SG SQL	Relational data extraction, joining tables, and database aggregation
BI & Dashboards	Po Power BI le Tableau	Building interactive executive dashboards and KPI visualization
Development IDEs	Ju Jupyter Notebook C VS Code	Interactive EDA prototyping, testing, and modular scripting
Version Control	Git Git ut GitHub el MS Excel	Code versioning, team collaboration, and quick data inspection

System Architecture Pipeline

Project Methodology & Workflow

Expected & Delivered Outcomes

Cleaned & Standardized Dataset

Delivered a fully pre-processed, high-quality dataset ready for statistical modeling and downstream business intelligence queries without structural anomalies.

Visual Pattern Discovery

Uncovered critical business trends, customer behavior metrics, and operational bottlenecks through structured exploratory visualization.

Interactive BI Dashboards

Empowered non-technical stakeholders to slice, filter, and analyze operational metrics independently through intuitive dashboards.

Predictive Analytics Insights

Trained predictive machine learning models to forecast churn risk and demand metrics under varying operational scenarios.

Assessment Certification & Performance

LEARN TUBE.AI ASSESSMENT

100%

Perfect Score (10.0 / 10.0)

Placing candidate in the **Top 5%** of assessed Data Analytics professionals globally.

GLOBAL RANK

#39 / 74,307

WEEKLY RANK

#39 / 154

Key Validated Competencies

Demonstrated strong mastery across Exploratory Data Analysis, growth/churn metrics, churn prediction modeling, and effective communication of analytical findings.

Certificate ID: DJA-B-1-2999033-0 | Issued: August 30, 2026
